

# Industry-focused Robotics Event organised by the East Midlands Enterprise Universities Lincoln, 30 November 2022

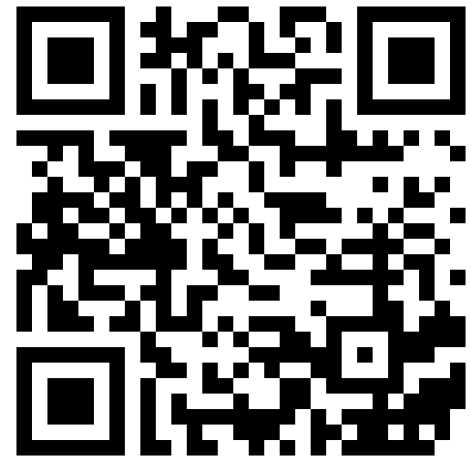

Are you intrigued by the idea of how your business could benefit from the introduction of automation and robotics?

If so, join us for a FREE one-day event at the University of Lincoln on 30 November 2022 featuring workshops, keynote talks and a tour around the University of Lincoln's state of the art Robotics Labs. Titled, '*How can autonomous systems and robotics be used in your business?*', the aim of the event is to demystify the subject matter, and show local business owners that the introduction of autonomous systems and robotics is not only possible, but can be massively beneficial.

The event is part of an ongoing initiative which sees East Midlands Enterprise Universities join forces with regional industries to work together exploring the recent advances in automation, robotics and more specifically, "collaborative robots" – robots working closely with and alongside humans.
